

## TABLE DIFFUSER MOD. AP100

The table fragrance diffusers model AP100 are designed for the aromatization of interiors of small dimensions and are characterized by their compactness and high-level efficiency.

The aromatization intensity can be adapted to every specific need and set through a simple control device that regulates the diffusion level. In order to curb their operating costs, the diffusers are conceived not to need any type of maintenance. Once the fragrance bottle is inserted and the diffusion intensity is set, the machine will work for about 4-6 months, according to the time of use and the diffusion intensity. After that period, only the fragrance bottle replacement will be necessary - a very easy operation that can be carried out in a few minutes even by non-experienced personnel.

From a decorative point of view, the diffusers model AP100 stand out for the sobriety of their design and the quality of the materials used, which make them elegant and refined furnishing accessories. The machine is, in fact, made of CORIAN®, a composite material created by DuPont, that provides high functional performances and a valuable ornamental function at the same time. CORIAN® is non-porous, can be easily cleaned, is strong, recyclable and pleasant to the touch, as it takes on the temperature of the interior in which it's placed.

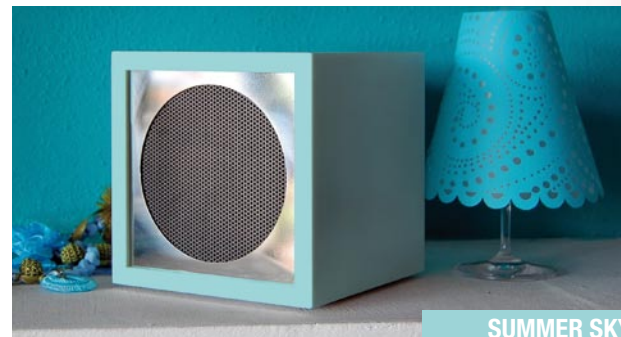

The diffuser comes in the standard color "Glacier white". More colours of the CORIAN® range are available upon request.
