

THE ADVANTAGES OF THE APHEA SYSTEM

Some of the advantages of the APHEA system compared to the current market offer:

- the fragrances are in liquid form, the most effective in diffusion;
- the natural vaporization process optimizes the volatilization of the fragrance in order to improve its diffusion without modifying the molecular structure of its components;
- in order to ensure the best quality of the fragrances and the top protection level of human and environmental health, all the components used in the preparation of the fragrances are in accordance with the IFRA Code of Practice standards and the EU Regulation REACH;
- The fragrances are alcohol-free (alcohol is irritating for the eyes, the mucosae and the respiratory system), CFC-free (CFC is detrimental for the environment) and do not give off phthalates;
- the system does not release perfume at regular intervals, but generates a continuous, homogeneous, delicate and constant fragrance diffusion;
- all the APHEA diffusers are provided with a system that allows to adjust the fragrance intensity according to the specific needs;
- model AP306, moreover, is provided with an electronic control panel for the daily programming operation;
- a bottle of fragrance ensures a constant diffusion over an average period of 3/6 months depending on the diffuser model, the fragrance type, the required aromatization intensity and the system time of use;
- except for the periodical substitution of the fragrance bottle (2/4 times/year), the diffusers do not require any kind of maintenance;
- the APHEA diffusers line was created by qualified Italian design experts;
- the diffusers are made of sophisticated, high-quality materials with a remarkable aesthetic impact (Corian® Du-Pont™, polished Inox steel, anodized and stove-enameled aluminum, etc.);
- all the APHEA products (diffusers and fragrances) are made in Italy.
